Notice for EPD Partial refresh

1. Working environment requirements:

   E-paper supporting partial refresh function (drive waveform file external version), partial refresh waveform file currently only corresponds to normal temperature environment (15~25 degrees Celsius)

   Other working environments do not guarantee the actual refresh effect.

2. Partial refresh frequency:

   After partial refreshing 5 times, a full-screen refresh operation needs to be performed. Otherwise, the partial refresh times are too many, which may cause the residual image of the electronic paper to be removed.

3. Origin coordinates:

   E-paper horizontal placement (FPC cable horizontal placement direction), the top right corner of the screen is the origin coordinates.

4. Minimum pixel point:

   The minimum unit supported by the partial refresh x-axis direction is 8 pixels, and the y-axis direction is not required.
